## PREFACE.

The general arrangement of matter in this Ephemeris for 1947 is the same as it was in our previous issues. The only change made in this issue is the substitution of Heliocentric Places of Planets for the Nodal Ephemeris of Mercury and Mars.

Thanks are due to Mr. A. K. Shirke, the Manager, A. D. Press, Lashkar, and his staff for the utmost care shown by them during the printing of this work.

Superintendent.

Shree Jiwajee Observatory.

Ujjain, October 1946.

Ujjian.

## EXPLANATIONS.

### I. Sidereal Time.

To find the Sidereal Time at a place corresponding to a moment given in Standard Time (old style)—

Formula.—The Sid. Time =  $S \pm (I + I' + I'') \pm L$ , where

$S$  = Sid. Time at Ujjain Mean Noon (as given in this Eph.).

$I$  = Interval between the given moment and Ujjain Mean Noon (i. e., 12h. 26m. 40s. I. S. T.). This is positive or negative according as the given moment is after or before noon.

$I'$  = The motion of Sid. Time corresponding to the interval  $I$ .

$I''$  = The motion of Sid. Time corresponding to the interval  $L$ .

$L$  = The Longitude of the place when measured from Ujjain. This is positive or negative according as the place is to the East or West of Ujjain.

Note.— $L$  is to be measured in time and the motion of the Sid. Time for  $I'$  and  $I''$  is 9.86 seconds per mean solar hour or .16 sec. per minute.

### II. The table of Ascendants and M. C.

This table gives the position of the Ascendant for each degree of latitude in India, corresponding to a given Sidereal time. The table for M. C. is applicable for every place and it gives the point of the zodiac transiting a place at a given sidereal time.

### III. The Sunrise and Sunset.

The moments are given in local time.

### IV.

#### A Note on Units of time.

1. There are 3 kinds of Periods in the planetary movement.

(i) *The Sidereal Period* of a planet (its true period of revolution round the Sun) is the time it takes to make a complete circuit round the star sphere, as seen from the Sun and not from the earth.

(ii) *The Anomalistic Period* is the interval between successive returns to the perihelion or aphelion.

(iii) *The Synodic Period* is the interval between successive conjunctions of the planet with the Sun.

### A DAY.

2. The 'Day', reckoned with respect to any body, is the interval between its successive returns to the meridian.

(i) *The Mean Solar Day* is the interval between the successive transits of the Mean Sun across a meridian. It is divided into 24 mean hours. Its variation from true Solar Day, i.e., the interval between two successive transits of TRUE SUN is about 48 seconds.

(ii) *The Mean Sidereal Day* is the interval between successive transits of the Mean Equinox across the meridian. Its value is 23h. 56m. 4'0905s. Mean Solar Time.

(iii) *The True Sidereal Day* is the exact period of the Earth's axial rotation, as shown by successive transits of a star across the meridian. Its value is 23h. 56m. 4'0996s. Measured in Mean solar Time

(iv) The ordinary *Lunar Day* is the interval between successive transits of the Moon across the meridian. It varies from 24h. 38m. to 25h. 6m. and averages 24h. 51m.

### A MONTH.

3. (i) *The Synodic Month* or Lunation (29.5306 days) is the period from New Moon to New Moon. New moons recur on the same day of the year every 19 years. This cycle is called the Metonic Cycle. The more accurate "Calippic Cycle" has 76 years or 940 Lunations.

(ii) *The Anomalistic Month* (27.5546 days) is the interval between successive positions of the Moon at its Perigee.

(iii) *The Nodical Month* (27.2122 days) is the interval between moon's position from one of its nodes to the same node again.

(iv) *The Sidereal Month* (27.3217 days) is the period in which the moon makes a complete circuit on the starry sphere.

### THE YEAR.

4 (i) *The Solar, Equinoctial or Tropical Year* (365.2422 mean solar days or 366.2422 sidereal days) is the period between the successive returns of the Sun to the same equinox, or to the solstitial point, and is the period in which the seasons recur.

(ii) *The Sidereal Year* (365.2564 days) is the interval between successive conjunctions of the Earth with a star, as seen from the centre of the Sun.

(iii) *The Anomalistic Year* (365.2596 days) is the mean interval between the Earth's return to the Perihelion.

(iv) *The Julian Year* as used in our Calendar consists of exactly 365.25 days.

(v) *The Lunar Year* (354.3670 days) consists of 12 Lunations and is used in the Mohammedan Calendar.

(vi) *The Eclipse Year* (346.6200 days) is the interval between successive returns of the Sun to the same node. It is interesting to note that 19 such years contain 6585.78 days which are equivalent to the ancient "SAROS" cycle of 18 years and 11 days in which the same eclipses occur regularly for over a long period.

(vii) *The Bessel's Fictitious Year* used in N. A. begins at the instant when the Sun's Longitude is exactly 280°.

# EPHEMERIS

OF

## Planets' Places for 1947.

### INTRODUCTION.

THE places of the Sun, Moon and the Planets given in the following pages are *Sayan* and are true for the mean equinox of 1947. They are given for 12 o'clock noon Indian Standard Time (I.S.T.) which is  $5\frac{1}{2}$  hours in advance of Greenwich Mean Time, but, for convenience, the *Sidereal Time* is given for the *Mean Noon, Ujjain Local Time*.\*

*Nirayana* places are obtained by subtracting the *Ayanamshas* from the *Sayan* places. These *Ayanamshas*, according to different systems prevalent in India, are as follows :—

|                            |                       |                                   |
|----------------------------|-----------------------|-----------------------------------|
| <i>Grahalaghav</i>         | $23^{\circ} 44' 25''$ | <i>Chitra</i> $23^{\circ} 6' 7''$ |
| <i>Raiyat (Zeta Pisc.)</i> | $19^{\circ} 7' 55''$  | <i>Madras</i> $21^{\circ} 40'$    |

It should be noted that the *Tithis* are the same both in the *Sayan* and the *Nirayana* systems.

### EXPLANATION OF SYMBOLS.

| Planets.             | Signs.         | Aspects.                            |
|----------------------|----------------|-------------------------------------|
| ⊕ Sun.               | ♈ Aries.       | ☌ Conjunction = $0^{\circ}$         |
| ☽ Moon.              | ♉ Taurus.      | ☍ Semi-Sextile = $30^{\circ}$       |
| ♃ Pluto.             | ♊ Gemini.      | ☍ Semi-Quintile = $36^{\circ}$      |
| ♆ Neptune.           | ♋ Cancer.      | ☍ Semi-Square = $45^{\circ}$        |
| ♺ Herschel (Uranus). | ♌ Leo.         | * Sextile = $60^{\circ}$            |
| ♻ Saturn.            | ♍ Virgo.       | ○ Quintile = $72^{\circ}$           |
| ♺ Jupiter.           | ♎ Libra.       | □ Square = $90^{\circ}$             |
| ♂ Mars.              | ♏ Scorpio.     | △ Trine = $120^{\circ}$             |
| ♀ Venus.             | ♐ Sagittarius. | ◻ Sesqui-quadrature = $135^{\circ}$ |
| ☿ Mercury.           | ♑ Capricornus. | ± Bi-quintile = $144^{\circ}$       |
| ⊕ Earth.             | ♒ Aquarius.    | π Quincunx = $150^{\circ}$          |
| ♻ Rahu.              | ♓ Pisces.      | ☍ Opposition = $180^{\circ}$        |

\*The ending moments of *Tithis* are calculated to keep uniformity.

| Mean Places of Principal Stars on 1st January 1947. |             |      |                   |                    |       |      |
|-----------------------------------------------------|-------------|------|-------------------|--------------------|-------|------|
| Names.                                              | Stars.      | Mag. | R. A.             | Decl.              | Long. | Lat. |
