PREFACE.

The positions of the major planets *viz.* Jupiter, Saturn, Uranus and Neptune were computed from Newcomb and Hill's Tables, while those of the Sun and the remaining planets were calculated from their respective elements. Half-day positions of Moon were taken from Brown's Tables. Owing to some uncertainty in the elements of Pluto, the positions of this planet cannot be strictly correct.

As a precaution against accidental errors the final results were differenced and all the doubtful cases were carefully scrutinised.

It is a pleasure to express my heartfelt thanks to my assistants Messers D. K. Belekar, Purushottam Joshi, Tej Kiran, P. S. Karkhanis, Chavreker and Ramchandra Sharma.

I hope the work will be duly appreciated by the Astronomers in spite of the short comings and slight errors that may inadvertently have crept in.

UJJAIN,  
October, 1949.

**EPHEMERIS**

OF  
Planets' Places for 1950.

**INTRODUCTION.**

THE places of the Sun, Moon and the Planets given in the following pages are *Sayan* and are true for the mean equinox of 1950. They are given for 12 o'clock noon Indian Standard Time (I.S.T.) which is  $5\frac{1}{2}$  hours in advance of Greenwich Mean Time, but, for convenience, the *Sidereal Time* is given for the *Mean Noon, Ujjain Local Time*.

*Nirayana* places are obtained by subtracting the *Ayanam shas* from the *Sayan* places.

It should be noted that the *Tithis* are the same both in the *Sayan* and the *Nirayana* systems.
