## PREFACE

The heliocentric places of Jupiter, Saturn, Uranus and Neptune were obtained from Newcomb and Hill's Tables and these were later converted into geocentric longitudes and latitudes. The geocentric places of Mercury, Venus and Mars were computed *directly* from their respective elements and this is why their heliocentric co-ordinates have now been omitted from the following pages.

Owing to the uncertainty in the elements of Pluto, the positions of this planet cannot be taken as strictly correct. It is estimated that the maximum error in its longitude will hardly exceed five minutes of arc.

As a precaution against accidental errors, the final results were differenced and all the doubtful cases were carefully scrutinised.

The timings of Moonrise given on pages 28 to 30 are true only for the Central Meridian of India. The method for converting these into I. S. T. for other places in this country is given on the back of this page. Tables for facilitating the calculations will be given in future publications.

**Eclipses in 1960**

There will be two solar and two lunar eclipses in 1960 as follows;—

- (1) March 13, Total Eclipse of the Moon. Invisible in India.
- (2) " 27, Partial Eclipse of the Sun. Invisible in India.
- (3) September 5, Total Eclipse of the Moon. (See note below.)
- (4) " 20-21, Partial Eclipse of the Sun. Invisible in India.

*Note.*—The eclipse of the Moon on September 5 will be visible in those places in India where the Moon rises before 18-36 (I. S. T.), i. e. at those places which lie on the *east* of the line roughly joining Trivandrum and Allahabad.

2. There will be a transit of Mercury over the disc of the Sun on November 7, but it will be invisible in India.
